

Emerging products :

Here are the latest innovations in the loading industry. These new products will help you carry out your projects more safely. Talk to one of our consultants for more information.

COMPOSITE LIFTING BEAMS **CALDWELL DURA-LITE™**

Composite lifting beams are now available. These beams offer the same capacity as traditional lifting beams and are just as strong and resistant, but they're ultralight. **Caldwell Dura-Lite™** lifting beams meet ASME B30.20 and BTH-1 industry standards, and their chemical composition has been proof tested. Lightweight, non-conductive, corrosion-proof and very heat resistant, **Dura-Lite™** lifting beams can be used for loads of up to three tons. They come with a warranty certificate and can be used with other pieces of equipment designed specifically for this product line.

HOIST RING **JERGENS LIFT-CHECK™**

You'll be able to lift any load safely with the brand-new **Jergens Lift-Check™** hoist ring. This new line of hoist rings is equipped with a DTI SmartBolts reading system, which indicate whether the bolt is safely fastened. Say goodbye to torque wrenched and manufacture tightening specifications !

These proof-tested hoist rings comply with ASME B30.20 and are fully traceable. Their 10% accuracy means incredible safety. They're easy to handle and reusable, don't twist or need calibrating, and reliably indicate whether a bolt joint is loose or tight.

NEW LINE OF **ELEBIA AUTOMATIC SAFETY HOOKS**

Do you deal with high-risk, expensive lifting ? You need an **Elebia automatic hook**. Elebia's automatic hook of the future will boost safety and productivity. The new sling trigger lets you lift and release loads without having to handle them or move, meaning your team stays safe. The Elebia hook will reduce lifting costs and the risk of injury for your employees.

The patented **Elebia** automatic hook is equipped with a powerful magnet in its lower section. When the magnet is close to the load, it attracts and positions the ring. The user just has to push the control button to make the hook close and catch the sling. The crane then lifts the load without any additional handling. The system works just as well with cable and chain slings as with master links and textile slings.

The hooks are available in a range of capacities, including 2, 5, 10, 20 and 25 mt.. Several options and accessories are also available.

SPEED UP YOUR INSTALLATION TIME **CROSBY™ SL-150 EYE BOLT**

The new **Crosby™ SL-150 Bolt** come equipped with characteristics you won't find on a typical eye bolt. Their locking mechanism slides to block the bolt, speeding up installation time, and there's no loss of capacity when lifting at an angle. They are the perfect compromise between articulated hoist rings and traditional eye bolts.
